Role Profile

Title	Python Engineer
Required Skills	FastAPI, PostgreSQL, distributed systems, LLM integration
Experience (years)	5
Priorities	—

Ranked Candidates

01

Ahmed Khalil

95/100

Ahmed Khalil is ranked first due to his exceptional alignment with the job requirements for the Python Engineer position. He exceeds the required experience with 6 years in the field and possesses all the critical skills, including FastAPI, PostgreSQL, distributed systems, and LLM integration. His experience with OpenAI GPT-4 and async task queues further solidifies his fit for the role, making him an excellent candidate.

Matching skills: FastAPI, PostgreSQL, distributed systems, LLM integration

Gaps: —

02

Sara Mansour

65/100

Sara Mansour is ranked second as she has a solid foundation in backend development with relevant experience in Python and PostgreSQL. However, her 4 years of experience fall slightly short of the required 5 years, and she lacks experience in distributed systems and LLM integration, which are crucial for the role. Her limited exposure to FastAPI also indicates a need for further development in this area.

Matching skills: Python, PostgreSQL, FastAPI

Gaps: distributed systems, LLM integration

03

Omar Najjar

10/100

Omar Najjar is ranked third due to his significant gap in both experience and required skills for the Python Engineer position. With only 1.5 years of experience as a Junior Developer and primary expertise in PHP, Laravel, and MySQL, he lacks the necessary professional experience and technical skills such as FastAPI,

PostgreSQL, distributed systems, and LLM integration. His beginner-level knowledge of Python is insufficient for the role.

Matching skills: beginner Python

Gaps: FastAPI, PostgreSQL, distributed systems, LLM integration

Original Job Description

We need a Python engineer with 5+ years experience in FastAPI, PostgreSQL, and distributed systems. Experience with LLM integration is a strong plus.
